

**48%** of cyberattacks involve web browsers ...

**Sekant runs detection models within browsers to block threats in real-time**

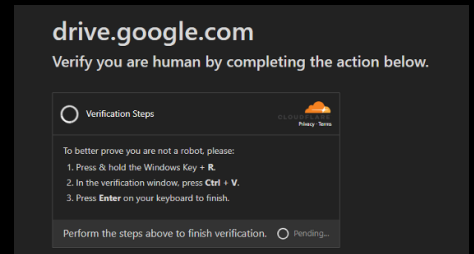

## Prevent Phishing

Attackers do not break in; they log in. Social Engineering is the leading cause for data breaches. Sekant flags brand impersonation, OAuth / Device Approval attacks & more.

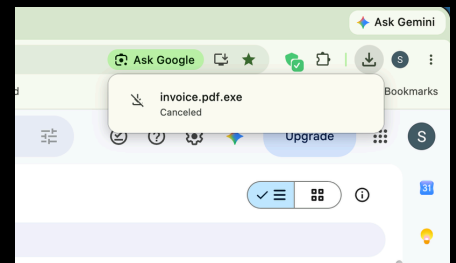

## Block ClickFix & variants

Microsoft reported that ClickFix was the most used initial access method in 2025. Sekant monitors the clipboard for malicious scripts and blocks them before the user can paste them.

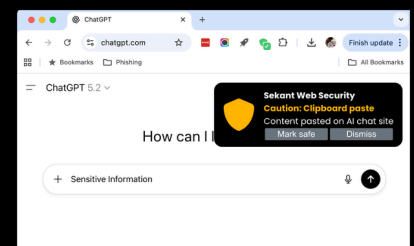

## Intercept Malware & Ransomware

EDR/EPP tools catch malware with known signatures or rely on reactive behavior detection. Sekant uses web context in addition to file content signals to proactively block 0-day malware.

## Monitor AI & Data Leakage

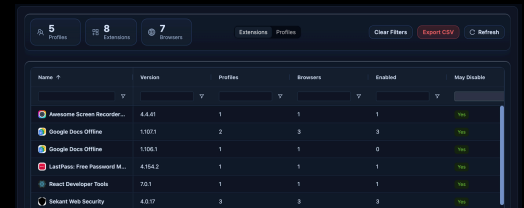

Shadow IT has a new twist: Shadow AI. IT tools lack visibility into browsers, making them the prime path for data leaks. Sekant gives visibility and enforces guardrails; even for AI usage.

# Sekant Security

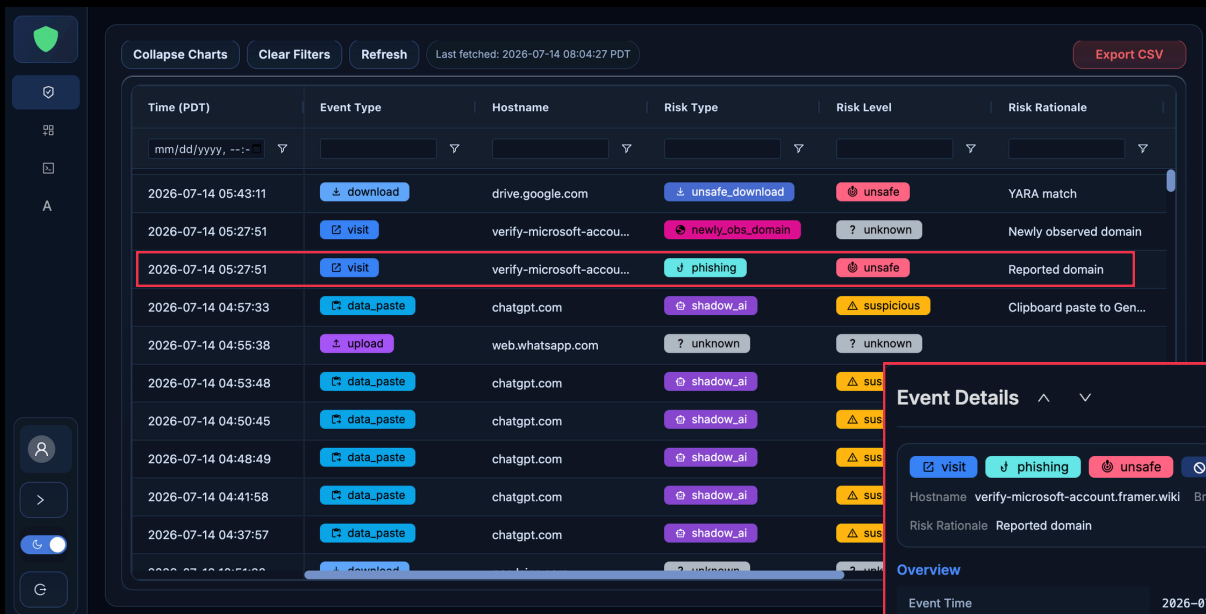

## Inventory Extensions

Compliance standards require complete software inventory; including browser extensions. Sekant inventories all extensions and their permissions to identify overly permissive / malicious extensions.

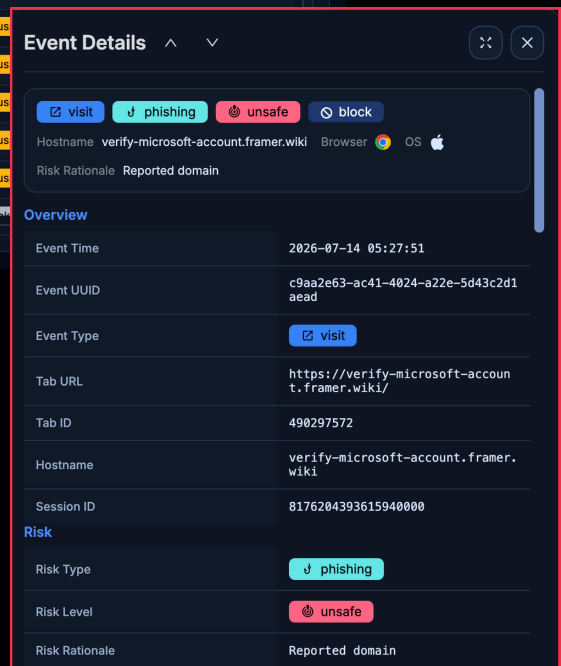

| Name                         | Version | Profiles | Browsers | Enabled | May Disable |
|------------------------------|---------|----------|----------|---------|-------------|
| Assessore Screen Recorder... | 4.4.41  | 1        | 1        | 1       | Yes         |
| Google Docs Offline          | 1.107.1 | 2        | 3        | 3       | Yes         |
| Google Docs Offline          | 1.106.1 | 1        | 1        | 0       | Yes         |
| LastPass: Free Password M... | 4.154.2 | 1        | 1        | 1       | Yes         |
| React Developer Tools        | 20.1    | 1        | 1        | 1       | Yes         |
| Sekant Web Security          | 4.0.0   | 3        | 2        | 2       | Yes         |
